Applications

Water Damage — Water leak on ceiling, wall, and roof top   Insulation — Energy Loss, Home Inspection, and HVAC

METER LiNK

Bluetooth®

FLIR METERLiNK feature frees the Thermographer from the manual process of collecting field data

Infrared cameras quickly locate moisture related problems

Collecting moisture readings on damaged surfaces and associating them with regions on an infrared image can be a complicated and cumbersome process
Manual data collection is time-consuming and prone to errors. METERLiNK eliminates this problem by allowing the thermographer to quickly take moisture readings on a damaged surface and associate those readings with the corresponding targets stored in an infrared image

Software Packages

FLIR Reporter is a powerful software for creating compelling and professional, fully customized, easy-to-interpret reports in a standard MS Word Document. You can create a report by simply Dragging and Dropping your images on a desktop icon or using the Wizards to guide you step-by-step through the process. The saved document is a 'live' report with full access to the analysis tools and temperature measurement data. The reports can be multi-page and include all of your IR inspection data -infrared and visual images, temperature measurements, voice comments and text notes.

FLIR BuildIR Software package specifically designed to carry out advanced analysis of building structures. It is used to analyze images taken with an infrared camera, and create inspection reports based on these images.

Panorama Function allows you to conveniently piece together normal sized images to create one large image for a wide angle view of the area being measured by using FLIR BuildIR or Reporter Software package

Scalable Picture-in-Picture

Allows for easier identification and interpretation of infrared images. This advanced technology enhances the value of an infrared image by allowing you to overlay it directly over the corresponding visible image. This functionality combines the benefits of both the infrared image and visual picture at the push of a button. The scalabilty feature permits you to resize the thermal image as needed on a large 3.5" color display.

Humidity Alarm

Displays building areas where surface condensation is present which shows a potential for mold growth

Insulation Alarm

Identifies insufficient insulation in building areas where insulation requirements are not met.
