Applications

- Test copper and triple play
- Test physical to services layers

Access network technologies are evolving quickly to keep pace with consumer demand for high-bandwidth services. Offerings such as high-speed Internet access, high-definition TV, and video on demand are pushing network performance requirements to new levels and increase complexity for technicians who turn up, troubleshoot, and maintain services. Therefore, service providers must equip technicians with a single, scalable easy-to-use test tool that addresses a wide range of test applications quickly and accurately under all field conditions.

The T-BERD/MTS-4000 is the one tool providers and technicians can both rely on, because it provides:

- The industry's first single handheld test platform with advanced fiber, copper, and triple-play testing capabilities.
- A multifunctional, scalable solution with several test applications that enable a quick return on investment.
- Multilayer testing to accelerate turn-up and installation.
- An easy-to-use, icon-based graphical user interface (GUI) for testing with minimal training.

Test Feature Overview

The T-BERD/MTS-4000 is a highly integrated platform with two module slots, a large 7-inch color screen (with a touch screen option), a high-capacity Lithium ion battery, an optional video inspection scope (through universal serial bus [USB] port), and optional built-in optical test functions, such as a visual fault locator (VFL), power meter, and optional WiFi/Bluetooth interface.

Fiber optics application modules used with the T-BERD/MTS-4000 can also be used with the T-BERD/MTS-2000 and the two products are interoperable

Broadband Power Meter

The T-BERD/MTS-4000 comes with optional built-in power meters so technicians can easily verify signal presence. The large screen T-BERD/MTS-4000 displays power values in large fonts for immediate results interpretation.
