## **MP OTDR Module**

T-BERD®/MTS-2000, -4000, -5800 platforms

The JDSU MP OTDR module provides the optimum performance that fiber installers and service providers need to test metro, cable TV (CATV) and FTTH networks with high-port-count splitters.

With various wavelength combinations including filtered wavelengths for in-service testing, an improved dynamic range, and optimized resolution and dead zones at short pulses, the MP module is the ideal OTDR to test any PON system with up to a  $1\times128$  splitting ratio.

The MP module's optical performance, combined with the T-BERD/MTS platform's complete suite of features, ensures that testing is done right the *first* time.

Standard testing features include:

- Automatic macrobend detection
- Summary results table with pass/fail analysis
- Bidirectional OTDR analysis
- FastReport on-board report generation

T-BERD/MTS-2000 one-slot handheld modular platform for testing fiber networks

T-BERD/MTS-5800\* handheld test instrument for testing 10 G Ethernet and fiber networks

T-BERD/MTS-4000 two-slot handheld modular platform for testing fiber, copper, and multiple services
