

SYNTHESIZED SWEEP/SIGNAL GENERATOR

69A, 68B series

10 MHz to 65 GHz

CE GP1B

**A microwave synthesizer for any application**

Anritsu Wiltron's El Toro microwave synthesizers present 80 models, providing you the right synthesizer for your LO duty, component analysis, signal simulation, or A.TE. applications. The 69A family, with the lowest Single Sideband (SSB) phase noise available, provides the ultimate performance at moderate cost; and includes models with unprecedented 0.01 to 65 GHz frequency coverage.

**Features**

- 120 models for perfect fit to any application
- Ultra-low SSB phase noise: -100 dBc at 10 kHz offset from 10 GHz
- 0.01 to 65 GHz frequency coverage in a single coaxial output
- Waveguide extensions to 110 GHz
- Economical upgrades
- +17 dBm maximum power, -125 dBm minimum power
- Internal AM, FM,  $\phi$ M, pulse modulation
- User down-loaded complex modulation

**Applications**

- **CW stimulus**  
 The 69000A/69000B Synthesized CW Generators feature 10 MHz to 65 GHz frequency coverage. CW or step sweep, low SSB phase noise and spurious signals, output levels to +17 dBm, and optional 0.1 Hz resolution combine to make these sources ideal for local oscillator replacement applications. To meet requirements that expand over time, economical upgrades are available to any higher performing model. For the most demanding CW requirements, the 69000A and 68000B provide the ultimate in performance.

**Swept measurements**

- The 69100A/68000B Synthesized Sweep Generators feature 10 MHz to 65 GHz analog, step, and manual sweep capability. Output levels to +17 dBm and optional 0.1 Hz resolution are available at prices comparable to CW only sources. To meet requirements that expand over time, economical upgrades are available to any higher performing model. Features, performance, and value combine to make the 69100A and 68100B the optimum sources for your network analysis and swept A.TE. source applications.

**High performance modulation for signal simulation requirements**

- The 69200A/68200B Synthesized Signal Generators provide AM and FM via external modulating signals or internal arbitrary waveform generators. The internal generators offer 7 modulating waveforms, including Gaussian noise, as well as user-defined arbitrary waveforms. Pulse modulation parameters can be set externally or by the internal pulse generator. Doublet, triplet, or quadruplet pulses make RADAR blind spot testing easy. Simultaneous synchronized modulations let you set complex signal scenarios across the entire 10 MHz to 65 GHz frequency range.

**Complete synthesized modulation and sweep capabilities for any signal requirement**

- The 69300A/68300B Synthesized Sweep/Signal Generators provide all the capabilities of our CW generators, sweep generators, and signal generators in a single package. The 69300A is the highest performance universal synthesized signal generator available today.

## Specifications

Frequency	CW mode	Output	Twenty independent, presettable CW frequencies (F0 to F9 and M0 to M9)									
		Accuracy	Same as internal or external 10 MHz time base									
		Internal time base stability	With aging: $<2 \times 10^{-8}/\text{day}$ ( $<5 \times 10^{-10}/\text{day}$ with Option 16) With temperature: $<2 \times 10^{-8}/^{\circ}\text{C}$ over $0^{\circ}\text{C}$ ( $<2 \times 10^{-10}/^{\circ}\text{C}$ with Option 16)									
		Resolution	1 kHz (0.1 Hz with Option 11)									
		Switching time	$<40$ ms to be within 1 kHz of final frequency (typical maximum)									
	Analog sweep mode (69100A, 69300A)	Sweep width	Independently selected from 1 MHz to full range continuous sweep. For $\ast 100$ MHz sweep width, the start, stop and bandswitching frequencies are phase-lock-corrected during sweep. For $\leq 100$ MHz widths, the center frequency is phase-lock-corrected.									
		Accuracy	The lesser of $\pm 30$ MHz or ( $\pm 2$ MHz widths) for sweep speeds of $\leq 50$ MHz/ms									
		Sweep time range	30 ms to 99 seconds									
	Phase-locked step sweep mode	Sweep width	Independently selected, 1 kHz (0.1 Hz with Option 11) to full range. Every frequency step in sweep range is phase-locked.									
		Accuracy	Same as internal or external 10 MHz time base									
Resolution (Min. step size)		1 kHz (0.1 Hz with Option 11)										
Steps		Number of steps: Variable from 1 to 10000 Step size: 1 kHz (0.1 Hz with Option 11) to the full frequency range of the instrument. (If the step size does not divide into the selected frequency range, the last step is truncated.)										
Dwell time per step		Variable from 1 ms to 99 seconds										
Switching time		$<15$ ms + 1 ms/GHz step size or $<40$ ms, whichever is less (typical max.)										
Alternate sweep mode		Sweeps alternately between any two sweep ranges. Each sweep range may be associated with a different power level.										
Manual sweep mode		Provides stepped, phase-locked adjustment of frequency between sweep limits. User-selectable number of steps or step size.										
Programmable frequency agility		Under GPIB control, up to 1000 non-sequential frequencies can be stored and then addressed as a phase-locked step sweep. Data is stored in volatile memory.										
Markers	Setting	Up to 20 independent, settable markers (F0 to F9 and M0 to M9)										
	Video markers	+5 V or -5 V marker output, selectable. AUX I/O connector, rear panel										
	Intensity markers	Produces an intensified dot on trace, obtained by momentary dwell in RF sweep										
Spurious signals	Frequency range	500 MHz to $\leq 2.2$ GHz (500 MHz units)	10 to 50 MHz (10 MHz units)	$>50$ MHz to $\leq 2$ GHz (10 MHz units)	$>2$ to $\leq 20$ GHz (2.2 to 500 MHz units)	$>20$ to $\leq 40$ GHz	$>40$ to $\leq 50$ GHz	$>40$ to $\leq 60$ GHz	$>40$ to $\leq 45$ GHz (65 GHz units)	$>45$ to $\leq 65$ GHz (65 GHz units)

	Emulations	The instrument responds to the published GPIB commands and responses of the models 6XX00-series signal sources. When emulating another signal source, the instrument is limited to the capabilities, mnemonics, and parameter resolutions of the emulated instrument.				
General	Stored setups	Stores front panel settings and nine additional front-panel setups in a non-volatile RAM. A system menu allows saving and recalling of instrument setups. Whenever the instrument is turned on, control settings come on at the same functions and values existing when the instrument was turned off.				
	Memory sequencing input	Accepts a TTL low-level signal to sequence through nine stored setups. AUX I/O connector, rear panel				
	Self-test	Instrument self-test is performed when SELF TEST soft-key is selected. If an error is detected, an error message is displayed in a window on the LCD identifying the probable cause.				
	Secure mode	Disables all frequency, power level, and modulation state displays. Stored setups saved in secure mode remain secured when recalled. Mode selectable from a system menu and GPIB				
	Reset	Returns instrument parameters to predefined default states or values. Any pending GPIB I/O is aborted. Selectable from the system menu				
	Master/slave operation	Allows two 68X00B output signals to be swept with a user-selected frequency offset. One 68X00B unit controls the other via AUX I/O and SERIAL I/O connections. Requires MASTER/SAVE interface cable set (part no. ND36329)				
	User level flatness correction	Allows user to calibrate out path loss due to external switching and cables via entered power table from a GPIB power meter or calculated data. When user level correction is activated, entered power levels are delivered at the point where calibration was performed. Supported power meters are Anritsu ML4803A and HP437B, 438A, and 70100A. Five user tables are available at up to 801 points/table				
	Warm up time (standard time base)	From standby: 30 minutes From cold start (0<): 120 hours to achieve <2 x 10 <sup>-8</sup> /day frequency stability				
	Warm up time (option 16 time base)	From standby: 30 minutes From cold start (0<): 72 hours to achieve <5 x 10 <sup>-10</sup> /day frequency stability				
	Power	90 to 132 Vac or 180 to 264 Vac, 49 to 440 Hz, ≤400 VA				
	Standby	With ac line power connected, unit is placed in standby when front panel power switch is released from the OPERATE position				
	Dimensions and mass	429 (W) x 133 (H) x 597 (D) mm [5.25 (H) x 16.875 (W) x 23.5 (D) in.], ≤23 kg (50 lb)				
	RF output connector	Type K female (≤40 GHz models), Type V female (>40 GHz models)				

\*1: All specifications apply to the phase-locked CW and step sweep modes at the lesser of +10 dBm output or maximum specified levelled output power, unless otherwise noted.

\*2: >40 GHz units and units with Option 15 at maximum specified levelled output power

\*3: For 6x1x5 units, maximum sensitivity is divided by 2 from 1 to 2.2 GHz and is divided by 4 from 500 MHz to 1 GHz.

\*4: The RF output can be pulse modulated via an external modulating signal or an internal square wave generator

\*5: All amplitude modulation specifications apply at 50% depth, 1 kHz rate, with RF level set 6 dB below maximum specified levelled output power, unless otherwise noted

\*6: All pulse modulation specifications apply at maximum specified levelled output power, unless otherwise noted

\*7: Maximum attenuation = attenuation ±flatness

\*8: All instrument functions, settings, and operating modes (except for power on/standby) are controllable using commands sent from an external computer via the GPIB (IEEE-488 interface bus).

	<b>Options</b>
Option 1	Rack mounting kit, includes one set of track slides (90° tilt capability), mounting ears, and front panel handles for mounting in a standard 19-inch equipment rack
Option 2A	Step attenuator (10 dB/step, high-end frequency of ≤26.5 GHz, rated output power is reduced)
Option 2B	Step attenuator (10 dB/step, high-end frequency of ≤40 GHz, rated output power is reduced)
Option 2C	Step attenuator (10 dB/step, high-end frequency of ≤50 GHz, rated output power is reduced)
Option 2D	Step attenuator (10 dB/step, high-end frequency of ≤60 GHz, rated output power is reduced)
Option 6	Phase modulation capability FM input and FM generator become FM/øM input and FM/øM generator (69200A, 68200B, 69300A and 68300B series) Not available with option 7
Option 7	Generators deletes the internal AM and FM generators (69200A, 68200B, 69300A and 68300B series). External AM and FM capability remains unchanged. Not available in combination with Option 6, 8, 10 or 20
Option 8	Internal power meter adds an internal power (69200A, 68200B, 69300A and 68300B series) compatible with 560-7, 5400-7, or 6400-71 series detectors. Not available with Option 7
Option 9	Rear panel RF output (moves RF output connector to the rear panel)
Option 10	Complex modulation (user defined modulation includes serial cable and Windows® based software) (69200A, 68200B, 69300A and 68300B series) (*Not available with Option 7)
Option 11	0.1 Hz frequency resolution (provides frequency resolution of 0.1 Hz)
Option 14	Wiltron 360B VNA compatibility (modifies rack mounting hardware to mate unit in Wiltron 360B VNA console)
Option 15	High power output (provides high-power from 2 to 26.5 GHz)
Option 16	High stability time base (adds an ovenized, 10 MHz crystal oscillator as a high-stability time base)
Option 17	Delete front panel (deletes the front panel for use in remote control applications where a front panel display and keyboard control are not needed)
Option 18	MM-wave bias (rear panel bias output to drive 54000-XX WRXX multiplier. BNC twinax: not available with Option 20)
Option 19	SCPI programmability adds GPIB command mnemonics complying with Standard Commands for Programmable Instruments (SCPI), Version 1993.0. SCPI programming complies with IEEE 488.2–1987
Option 20	SCAN modulator (adds an internal SCAN modulator for simulating high-depth amplitude modulated signals in models 68237B, 68337B, 68247B and 68347B only. Requires an external modulating signal input: not available in combination with Option 7 or Option 18)
