CMA4500 Series

SPECIFICATIONS

Optical Time Domain Reflectometer

The CMA 4500 is a full featured, non-modular solution for situations that only require OTDR and Loss Test Set capabilities.

You can have it all with the CMA4500

Highlights include a powerful PC based unit, large, high resolution color display that's easy to read, touch screen and hard key user interfaces and several optics options to cover any testing requirements from single mode to multimode, from 1 meter to 250 Km. Additional features include dual USB ports, a 10/100 Ethernet interface and an optional integrated CD-R/W drive for easy data transfer. Whether you're a first time user or industry veteran, the CMA4500 will take fiber installation, maintenance and documentation of your optical network to a new level.

Added value through performance

As added value, the CMA4500 can be equipped with a stabilized light source and power meter for complete end-to-end loss testing. In addition, a Visual Fault Locator (VFL) option enables users to visually locate breaks within central offices and quickly identify specific fibers within a cable or splice tray. Round this out with the optional connector inspection microscope to reduce costly and timely troubleshooting of connector related issues and your CMA4500 quickly becomes the one tool you'll rely on to get your network up and running.
