Product Brochure

Site Master™ S311D

Cable and Antenna Analyzer, 25 MHz to 1600 MHz

Site Master™ is the perfect instrument for Land Mobile Radio and Public Safety system applications.

Anritsu's S311D Site Master builds upon Anritsu's expertise in developing accurate, portable, rugged, and easy-to-use field instruments with a rich set of features aimed at simplifying life for field use.

S311D Site Master is the perfect instrument for Land Mobile Radio (LMR) and Public Safety system technicians testing the cables and antennas of P25 and TETRA radios in the VHF/UHF, 700 MHz and 800 MHz bands. The Site Master is also ideal for broadcast and cellular applications.

The high performance 1600 MHz cable and antenna analyzer can be used to sweep cables and antennas at the frequency of operation using the Return Loss and VSWR measurements. The Distance-To-Fault (DTF) measurement can easily spot poor connections, contamination, damaged cables, water penetration, and bad antennas. Site Master's Frequency Domain Reflectometry (FDR) techniques break away from the traditional fix-after-failure maintenance process by finding small, hard to identify problems before major failures occur.

Rugged and Reliable

Because the Site Master was designed specifically for field environments, it can easily withstand the day-to-day punishments of field use. The instrument is almost impervious to the bumps and bangs typically encountered by portable field equipment.

Easy-to-Use

The menu driven user interface is intuitive and easy to use and requires little or no training time. A standard high resolution TFT color display provides visibility in broad day light. A full range of markers enable the user to make accurate measurements. Limit lines simplify measurements allowing users to create quick and simple pass/fail tests.

Take it anywhere

Weighing less than 5 lbs (2.3 kg) with its rechargeable NiMH battery, the S311D moves effortlessly from ground installations to anywhere where critical measurements are needed. Sophisticated charging circuits optimize the life of the battery. Replacing the battery in the field takes no time at all and requires no tools.

Six built-in Languages

The Site Master is equipped with local language support in English, Chinese, Japanese, French, German, and Spanish.

The Site Master is a multi-function field solution

Site Master Highlights

- Frequency Range: 25 MHz to 1.6 GHz
- Measurements: Return Loss / VSWR, Cable Loss, Distance-To-Fault (DTF), Optical DTF
- Sweep Speed: 2.5 msec / data point
- Accuracy: > 42 dB corrected directivity
- Display: TFT color with adjustable backlight
- Calibration: OSL, InstaCal[™], and FlexCal[™]
- RF Immunity: Performs accurate measurements in co-located cell sites
- Signal Standard List / Cable Standard List: Quickly locates commonly used cables and frequency standards.
- Trace Overlay: Monitors changes with reference traces over time.
- Limit Lines: Single and Segmented Limit lines
- · Language Support: Chinese, English, French, German, Japanese, Spanish
- Handheld Software Tools: Downloads traces, creates reports, compares traces, and renames files.

Options

- High Accuracy Power Meter (Option 19): Performs high accuracy terminating or inline power measurements.
- Power Monitor (Option 5): Performs accurate broadband power measurements using external detector.

High Performance Cable & Antenna Analyzer

FDR Technique

Frequency Domain Reflectometry, (FDR), and Time Domain Reflectometry, (TDR), have similar acronyms, and both techniques are used to test transmission lines. But, that's where the similarities end. TDRs are not sensitive to RF problems: the TDR stimulus is a DC pulse, not RF. Thus, TDRs are unable to detect system faults that often lead to system failures. Additionally, FDR techniques save costly, time-consuming trouble shooting efforts by testing cable feed-line and antenna systems at their proper operating frequency. Deficient connectors, lightning arrestors, cables, jumpers, or antennas are replaced before call quality is compromised.

Quick, Simple Measurements

Site Master performs various RF measurements aimed at simplifying cable feedline and antenna analysis: Return Loss, SWR, Cable Loss and Distance-to-Fault (DTF). A single key selection on the main menu activates the desired measurement mode.

Return Loss, SWR

Return Loss and SWR "system" measurements ensure conformance to system performance engineering specifications. Measurement easily toggles between either one of the two modes and can be performed without climbing the tower.

Cable Loss

Cable Loss measurements measure the level of insertion loss within the cable feed-line system. Insertion loss can be verified prior to deployment, when you have access to both ends of the cable, or on installed cables without access to the opposite end. Site Master automatically calculates and displays the average cable loss so there is no more guess work or a need to perform calculations in the field.

Distance-to-Fault

Although a Return Loss test can tell users the magnitude of signal reflections, it cannot tell the precise location of a fault within the feed-line system. Distance-To-Fault measurements provide the clearest indication of trouble areas as it tells us both the magnitude of signal reflection and the location of the signal anomaly.

Distance-To-Fault measurement capability is built into all Site Master models as a standard feature. Return Loss (SWR) measurement data is processed using Fast Fourier Transform and the resulting data indicates Return Loss (SWR) versus distance. Distance-to-Fault measurements indicating Return Loss or SWR versus time is available with Handheld Software Tools."

RF Power Measurements for a variety of applications

Power Monitor (Option 5)

The optional Power Monitor features precision, high return loss (low SWR) detectors ideal for broadband CW power monitoring. A wide range of detectors is available with upper frequency ranges from 3 GHz to 50 GHz. Display formats include absolute power (dBm or Watts) and relative power (dBr or %). Built-in Auto- Averaging automatically reduces the effects of noise while zeroing control allows optimum measurement accuracy at low power levels.

High Accuracy Power Meter (Option 19)

Anritsu's High Accuracy Power Meter option enables users to make high accuracy RMS measurements, perfect for both CW and digitally modulated signals such as CDMA/EV-DO, GSM/EDGE, P25 and TETRA. This option requires sensor PSN50 or MA24104A. The PSN50 sensor provides high accuracy measurements from 50 MHz to 6 GHz with a dynamic range from –30 to +20 dBm. The MA24104A is an Inline High Power Sensor with a frequency range from 600 MHz to 4 GHz and can measure signals as high as 150 W. Both of the sensors are equipped with an RS-232 interface for fast and easy connection to the Site Master.

Handheld Software Tools

Although Site Master features built-in analytical and reporting functions, users can also download measurement data to a PC for additional analysis or report generation. Site Master's user friendly Software Tools is a Windows® program designed specifically for cable and antenna analysis and will run on any computer with Windows 95/98/NT4/2000/ME/XP/Vista test data can be analyzed and compared to historical performance.

- Up to 300 Site Master trace memory locations can be downloaded with a single menu selection
- Build historical records with an unlimited number of traces in one document
- Intelligent Trace Renaming features allow you to rename hundreds of traces in minutes instead of hours.
- Edit and create custom signal standards and cable lists
- Create custom reports
- View Spectrogram displays in 3D
- Copy markers and limit lines from one trace to all the traces in a specific folder with easy to use group edit functions
- Use the Product Update feature to make sure you always use the latest instrument firmware.

OSLNF50-1	Precision Open/Short/Load, DC to 6 GHz, 42 dB, 50 Ω, N(f)			
22N50	Open/Short, DC to 18 GHz, N(m), 50 Ω			
SM/PL-1	Precision Load, DC to 6 GHz, 42 dB, N(m), 50 Ω			
22NF50	Open/Short, DC to 18 GHz, N(f), 50 Ω			
SM/PLNF-1	Precision Load, DC to 6 GHz, 42 dB, N(f), 50 Ω			
2000-1618-R	Precision Open/Short/Load, DC to 6 GHz, 7/16 DIN(m), 50 Ω			
2000-1619-R	Precision Open/Short/Load, DC to 6 GHz, 7/16 DIN(f), 50 Ω			
22N75	Open/Short, DC to 3 GHz, N(m) 75 Ω			
26N75A	Precision Termination, DC to 3 GHz, N(m) 75 Ω			
22NF75	Open/Short, DC to 3 GHz, N(f) 75 Ω			
26NF75A	Precision Termination, DC to 3 GHz, N(f) 75 Ω			
12N50-75B	Matching Pad, DC to 3 GHz, 50 Ω to 75 Ω			
Precision Adapters				
34NN50A	Precision Adapter, N(m)-N(m), DC to 18 GHz, 50 Ω			
34NFNF50	Precision Adapter, N(f)-N(f), DC to 18 GHz, 50 Ω			
Adapters				
510-90-R	Adapter, 7/16 DIN(f)-N(m), DC to 7.5 GHz, 50 Ω			
510-91-R	Adapter, 7/16 DIN(f)-N(f), DC to 7.5 GHz, 50 Ω			
510-92-R	Adapter, 7/16 DIN(m)-N(m), DC to 7.5 GHz, 50 Ω			
510-93-R	Adapter, 7/16 DIN(m)-N(f), DC to 7.5 GHz, 50 Ω			
510-96-R	Adapter, 7/16 DIN(m)-7/16 DIN(m), DC to 7.5 GHz, 50 Ω			
510-97-R	Adapter, 7/16 DIN(f)-7/16 DIN(f), DC to 7.5 GHz, 50 Ω			
Adapters w/ Reinforced	l Grip			
1091-379-R	Adapter w/ Reinforced Grip, 7/16 DIN(f)-7/16 DIN(f), DC to 6 GHz, 50 Ω
