Feature(s) of this product is/are protected by US Patents 7,187,861, 7,995,915 and 8,861,953 and pending application(s); Chinese patent 200480022721.7; Chinese pending patent CN1102611497A; European Patent 1,673,881 and associated national entries in numerous European countries; German Utility Patent 202004021208.0; Russian Federation Patent 2,345,490; and/or Canadian Patent 2,541,838.

Unique workflow management for faster PON deployments

## KEY FEATURES

Concurrent measurement of all PON signals\*  
anywhere on the network

Innovative workflow management  
for boosted test routine efficiency

Enhanced rugged and weatherproof design

Protected data format for guaranteed  
test result authenticity

## COMPLEMENTARY PRODUCTS

**AXS-100**  
Access OTDR

**FIP-400**  
Fiber Inspection Probe

## THE FRONTRUNNER NOW RUNS EVEN FASTER

When FTTH was first deployed, EXFO was there to test it, namely by pioneering the concurrent upstream/downstream measurement technique via a pass-through connection. In fact, the EXFO-pioneered PPM-350 series, which quickly established itself as the clear-cut leader in the PON power meter market—over 35000 units sold—has played an important part in major FTTH deployments worldwide.

Since then, we have developed our instrument even more to provide you with the best PON power meter to date. The PPM-350C enables quick, on-site testing of all PON signals, anywhere on the network. Its new workflow management capabilities and enhanced ruggedness will increase the efficiency of your daily deployment activities.

Moreover, its visual fault locator port allows for easy fiber identification and macrobend location. This handheld unit also features pass/warning/fail LED indicators with user-defined thresholds.

## RELIABLE PERFORMANCE, WHETHER THE ELEMENTS AGREE OR NOT

Thanks to its enhanced weatherproof design and intuitive user interface, and building on the strength of its predecessor (PPM-350B), the PPM-350C PON Power Meter establishes a new FTTx testing benchmark. It delivers fast, reliable results, even when used in cold, wet or windy conditions.

### Easy-to-Access Data Storage

The unit's data storage capabilities provide ultimate flexibility. Transfer your data quickly and easily, store your test results for future reference and generate a wide range of FTTH reports. Moreover, the PPM-350C allows you to store up to 1000 test results, which are downloadable through its USB interface.

### Simultaneous Display of All PON Signals

The PPM-350C acts as a pass-through device, allowing the concurrent measurement and simultaneous display of all PON signals—voice, data and video. This patented, built-in technology facilitates service-activation testing and troubleshooting.

### Quick and Efficient Visual Inspection

Whether to identify breaks, bends, faulty connectors or splices, as well as other causes of signal loss, the PPM-350C's optional visual fault locator (VFL) enables quick and easy troubleshooting. This valuable option helps you shorten time-to-restoration cycles and increase the productivity of your field crews.

### Automated Pass/Warning/Fail Assessment

In addition to user-defined thresholds, EXFO's PON power meter offers pass/warning/fail LED indicators that allow you to clearly and quickly assess your network's power level. This user-friendly feature facilitates QoS verification.

### Rugged and Weatherproof Design

Truly rugged and weatherproof, the PPM-350C is the ideal tool for technicians working outdoors. Its enhanced design also features a waterproof keyboard, port cover flaps and a protective cap.

## UNIQUE WORKFLOW MANAGEMENT FOR FASTER DEPLOYMENTS

### Ensure the Authenticity of Each Measurement

Eliminate guesswork with EXFO's comprehensive and easy-to-use data-storage interface designed with PON testing in mind. Test results can be stored and flagged per OLT, per ONT and even, per location. Then, they are stored in a protected data format, ensuring the authenticity of each measurement.

### Customize Location Names, Inside and Outside

The computer interface allows easy customization of OLT, ONT and location names. Start testing right away; don't waste time naming files. This time-saving feature eliminates the risk of mistakes. Each file is named correctly so you don't have to worry about having to rename each file when you are back at the office.

## ELIMINATE WRONG DATA NAMING AND SPEED UP TEST ROUTINES

The PPM-350C features a Job Editor mode, which allows you to pre-configure upcoming jobs in the unit's memory. Once on location, you simply have to select the job ID, the ONT number and the location ID for quick data storage—making the need to carry your work schedule in the field a thing of the past. This is the best way to link results with customers/activations, also called jobs. It's as easy as 1-2-3:

Plus, even when the Job Editor mode is not configured, you can still store your results using generic names, for quick and efficient testing.
