Fluke 740 Series Documenting Process Calibrators: Ready for anything

Technical Data

Whether you're calibrating instruments, troubleshooting a problem or running routine maintenance, Fluke 740 Series process calibrators can help you get the job done faster. It does so many different tasks, so quickly and so well, it's the only process calibrator you need to carry.

- Multifunctional. Calibrate temperature, pressure, voltage, current, resistance, and frequency. Since it both measures and sources, you can troubleshoot and calibrate all with one rugged tool.
- Powerful, yet easy to use. The easy-to-follow, menu-driven display guides you through any task. Programmable calibration routines enable you to create and run automated as-found/as-left procedures to ensure fast, consistent, calibrations.
- Records and documents results.

 To support your ISO-9000 or regulatory standards, the Fluke 741B, 743B, and 744 capture your calibration results, eliminating the need to juggle a pen and pad in the field. The RS-232 interface in the Fluke 743B and 744 lets you transfer the results to a PC, thus saving the time of having to manually transcribe them when you return to the shop.
- Supports popular instrumentation management software. The 743B and 744 work with the Fluke DPC/TRACK™ software, and with popular programs from Honeywell Loveland, Cornerstone, Yokogawa, Prime Tech-nologies, On-Time Support, and others. It allows you to create procedures, instructions, and action lists to deliver fast, easy documentation.
- Truly hand-held. Small enough to fit easily into a tool bag and to use in tight spaces. Runs an entire shift on a rechargeable NiCd or NiMH battery pack.

- Rugged and reliable. Overmolded urethane case stands up to rough handling in industrial environments. Calibrators offer one- or two-year calibration cycles and three-year warranty.
- **Bright white display** lets you read your results in any kind of light.
- Soft keys provide one-touch access to enhanced functions such as task lists, – automated procedures, scaling, min/ max, stepping and ramping, and review memory.
- Three operating modes Measure, Source, or simultaneous Measure/ Source, — enable technicians to troubleshoot, calibrate, or maintain instrumentation with just one tool.
- Integrated HART communication capability lets you program and control HART instrumentation (744 only).
- Multi-lingual interface displays instructions in English, French, German, Spanish, and Italian.
- AutoStep allows technicians to set the calibrator for a delayed start and a specific sequence of steps, so it can run unattended as a continuously varying test source.
- User entered values enable users to capture readings measured or sourced by other devices.
- Custom units allow readings to be scaled and displayed in any userdefined units.
- Limit switch calibration procedures perform fast, automated calibration of oneand two-point limit switches for voltage, current, temperature, and pressure.
- Differential pressure flow instrument calibration routines use a square root function to directly calibrate DP flow instruments.

• Built-in algebraic calculator

with four functions—plus square root—stores, recalls, and performs calculations required for setting up instruments or evaluating data in the field. Use it to set the source function to a calculated value. There's no need to carry a pencil and paper or a separate calculator.

 Programmable measurement delay inside automated procedures permits calibrating instruments that respond slowly.

Two bonus features available with product registration:

- Transmitter mode
- Bar code entry (except 741B)

740 Series

The Fluke 740 Calibrators, offered in three models, let you choose the right set of capabilities for your needs

- The Fluke 741B offers simultaneous source and measure capabilities for all common process parameters. Create and execute automated procedures and automatically capture the results.
- The Fluke 743B offers all the capability of the 741B, plus adds a serial interface for two-way communication with popular PC-based instrumentation management applications.
- The Fluke 744 offers all of the capabilities of the 743B, plus the ability to maintain and calibrate selected HART transmitters without a second tool.

744 upgrades available

Fluke periodically releases new internal software for the Fluke 744. These upgrades include:

- New revisions of previously supported instruments.
- Device-specific command support for new instruments.
- New HART communication capability.
 The upgrade can be easily loaded from a PC to a 744.

What's new in Version 2.5

- Device-specific calibration support for new instruments:
 - Micro Motion 2000, 2000 IS, 9701, 9712 and 9739 coriolis flow transmitters
 - Fuji FCX and FCXA2 pressure and FRC temperature transmitter

• New features:

- Support for New Hart Scientific dry blocks: 7103, 9007, 9011, 9023, 9103, 9105, 9107, 9122, 9127, 9132, 9133 and 9150
- Enhanced dry block delay setting for temperature switch testing
- · Switch test without reset

The first field calibrator for HART instruments that's both powerful and easy to use.

The 744 offers the most complete HART implementation of any process calibrator. The 744:

- Requires no external box or second tool for everyday HART calibration and maintenance.
- · Offers fast HART communication.
- Supports popular models of HART transmitters, with more device-specific command support than any other HART field calibrator.
- Fully complies with the Data Link Layer of the HART protocol, including multiple masters, burst mode, and multi-drop configurations.
- Is easy to update as additional instruments are added and new HART versions are released.
- Is based on the 743B, the most rugged, reliable multifunction field calibrator available.
- Is backed by the service and support of the Fluke organization, a member of the HART Communications Foundation.

How to compare calibrators based on specifications.

Analyzing specifications can be complex. To get a true picture of calibrator performance, you should be aware of the key components of a specification and how to interpret them. Specifications must be carefully considered when comparing calibrators from different vendors. The most important components of a process calibrator specification are:

- Reference uncertainty. Performance of a calibrator at 23 °C \pm 3°C at the time it is verified by the manufacturer. This specification does not include the effects of time and temperature, two of the largest components of calibrator error.
- Time. Fluke 740 Series calibrators are delivered with both one-year and two-year specs, to limit your calibration support costs. You choose your cal interval based upon the performance you need.

- Temperature. Fluke process calibrator specs reflect performance from 18 ° to 28 °C. Compensation factors are provided to permit specified use of the calibrators over a wide -10 ° to 50 °C range.
- Allowance for traceability. Fluke specs are not relative specs, but total specs, including an allowance for uncertainty of standards that provide traceability to national standards.
- Confidence level. Fluke uses a conservative 95% confidence level when setting specifications, increasing your confidence that your calibrator will remain in spec for its stated calibration interval.

Temperature scale: ITS-90 or IPTS-68, selectable

Compensation: ITS-90 per NIST Monograph 175 for E, N, J, K, T, B, R, S thermocouples; IPTS-68 per IEC 584-1 for E, J, K, T, B, R, S thermocouples; IPTS-68 per DIN 43710 for L, U thermocouples Temperature coefficient: 0.05 °C/°C from -10 °C to 18 °C and

28 °C to 50 °C

Common mode error: 0.01 °C/(Common Mode Volt)

Maximum input voltage: 30 V dc

Note: When simulating temperature in As Found/As Left procedures, steps may be either linear by temperature or linear by mV potential.

Fluke 700 Pressure Modules

The Fluke family of 29 pressure modules:

Covers virtually any pressure application including gage, differential, dual (compound), absolute, and vacuum.

- Display pressure readings in any of 10 different pressure units you specify in the calibrator setup.
- Rugged urethane molded cases protect the modules from rough handling and harsh conditions.
- Features internal temperature compensation from 0° to 50 °C for full-accuracy performance.
- Includes NIST-traceable calibration certificate.
- Modules can be calibrated locally, helping to control costs.

 $^{^1}$ Total uncertainty, one year for temperature range 0 $^\circ$ C to +50 $^\circ$ C. Total uncertainty, 1.0% of full span for temperature range -10 $^\circ$ C to 0 $^\circ$ C. For POO module only, compensated temperature range is 15 $^\circ$ to 35 $^\circ$ C.

Use of pressure zero is required prior to measurement or source. Maximum overpressure specification includes common mode pressure. Modules are (frated. Metric adapter(s): 1/4" NPT female to male BSP/ISO 1/4-19, tapered thread, included with all modules except P29, P30, and P31. Effective October 1996, all modules include a NIST traceable certificate and test data.

² "Dry" indicates dry air or non-corrosive gas as compatible media. "316 SS" indicates media compatible with Type 316 Stainless Steel. "C276" indicates media compatible with Hastelloy C276.

General Specifications

Data log function (except 741B)

Measure functions: Voltage, current, resistance,

frequency, temperature, pressure **Reading rate:** 1, 2, 5, 10, 20, 30, or 60 readings per

Maximum record length: 8000 readings (7980 for 30 or 60 readings per minute)

Ramp function

Source functions: Voltage, current, resistance,

frequency, temperature Rate: 4 steps/second

Trip detect: Continuity* or voltage *Continuity detection not available when sourcing current

Loop power function

Voltage: Selectable, 24 V or 28 V

Accuracy: 5%

Maximum current: 22 mA, short-circuit protected

Maximum input voltage: 30 V dc

Note: 250Ω series resistance is automatically supplied whenever loop power is

HART modem interface (744 only)

Maximum input voltage: 30 V dc

Environmental specifications

All calibrator specifications apply from +18 °C to +28 °C unless stated otherwise.

Operating temperature: -10 °C to 50 °C, (-20 °C typical except for frequency and ac voltage measure-

Storage temperature: –20 $^{\circ}\text{C}$ to 60 $^{\circ}\text{C}$

Operating altitude: 2800 m above mean sea level

90-day specifications: The standard specification intervals for the 740 Series are 1 and 2 years. Typical 90-day measurement and source accuracy can be estimated by dividing the one year "% of reading" or "% of output" specifications by 2. Floor specifications, expressed as "% of f.s." or "counts" or "ohms" remain constant.

Power: Internal battery pack NiCd, 7.2 V, 1700 mAh; NiMH (744 only) 7.2 V, 3500 mAh

Battery Life: Typical usage, >8 hours

Dimensions: 130 x 236 x 61 mm (5.1 x 9.3 x 2.4 in.)

Weight: 1.4 kg (3 lbs. 1 oz.) **Side Port Connections:**

• Pressure module connector

• RS-232 connector (743B and 744) to interface to

· Connection for optional battery eliminator

Safety: Complies with CAN/CSA C22.2 No 1010.1-92, ANSI/ISA S82.01-1994, UL3111, and EN610-1:1993.

Data Storage Capacity:

Fluke 741B-1 day of calibration results Fluke 743B and 744-1 week of calibration results

FLUKE-741B Documenting Process Calibrator FLUKE-743B Documenting Process Calibrator FLUKE-744 Documenting Process Calibrator-HART

Included with the Fluke 740 Series:

Type TL224 Industrial Test Leads (two sets), AC220 Test Clips (2 sets), TP220 Test Probes (1 set), Battery Pack, Battery Charger, serial port cable (except 741B), HART communications cable (744 only), DPC/TRACK Sample with free PC communication utility software (except 741B), Instruction Manual, NIST-traceable calibration report and data, three-year warranty.

FLUKE-700SW DPC/TRACK Software (for use with Model 743B or 744 calibrators)

Included with DPC/TRACK software:

Software media, Instruction Manual, Serial Port Cable, DB9 to DB25 (9 pin to 25 pin) Adapter.

FLUKE-700 Pxx Pressure Modules

Included with each Fluke Pressure Module: BP-ISO Adapter(s) (except with P29 - P31), Instruction Sheet, NIST traceable calibration report and data, one-year warranty.

When registering your Fluke 740 Series at www.fluke-warranty.com you will receive two bonus features:

Test Lead Case

- Transmitter mode, allowing the 740 calibrator to be programmed as a transmitter. Ideal for emergency use. Any valid combination of in- or output can be used.
- Bar code entry for automatic input of Tag-id and s/n data (except 741B)

Fluke tools for the Process Industry:

Calibrate and troubleshoot all your process instrumentation.

The Fluke range of process tools give you all the choice you need to maintain and calibrate virtually all types of sensors and transmitters.

Whether you want all the required functionality in just one tool, or a dedicated tool for temperature or pressure only, the choice is yours.

Check our complete line of Process Meters, Documenting, Multifunction, Temperature, Pressure and Loop Calibrators and see for yourself how you can maximize your maintenance efficiency.

Fluke 707Ex, the fast, one-handed tool for loop checks in EX zones

The 707Ex is an intrinscally safe loop calibrator for use in explosion endangered areas. The Fluke 707Ex is certified in accordance with the ATEX directive (Ex II 2 G Eex ia IIC T4) in Zones 1 and 2. The 707Ex is also certified to operate in accordance with Factory Mutual N.I. Class 1, Division 2 areas Group A-D.
