Fluke FlexCam Infrared Cameras include IR-Fusion**, a patented technology that fuses a visual, or visible light, image with an infrared image for better identification, analysis and image management. SmartView* IR analysis and reporting software is included with each purchase along with free software upgrades for the life of your product.

These models feature 320×240 detectors and temperature sensitivity (NETD) down to 0.05 °C (50 mK) in the higher end model.

Choose Fluke FlexCam Infrared Cameras when you need industry leading thermal sensitivity for high resolution, ultra highquality images.

Typical applications:

- Troubleshooting—Pinpoint the location of specific problems in equipment and systems.
- **Preventive/predictive maintenance** Identify electrical and mechanical problems before they become costly failures.
- Industrial maintenance—Check whether repairs have been performed correctly.
- Process monitoring—Real-time observation to ensure efficient and safe operations.
- **Quality control**—Examine prototypes and refine thermal management designs.
- Research and development—Quantify heat patterns to improve product designs.
