

OneExpert™ For xDSL, G.fast & FTTH

Fast, consistent, and complete!

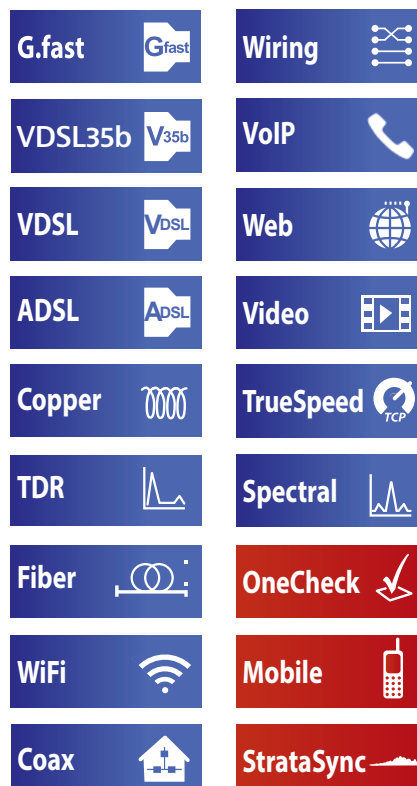

Consistently achieve high-performance results when deploying ultra-fast residential broadband over xDSL, G.fast, and FTTH.

OneExpert helps field technicians fix problems right the first time, every time. A multitouch, user-friendly interface and OneCheck™ automated tests ease complex tasks with clear pass/fail results. And, its future-proof modules ensure years of use supporting access and home networks.

Key Benefits and Features

- One button OneCheck™ TDR auto identifies fault types and locations right away
- Prove the true customer experience with a standardized TrueSpeed™ test (RFC-6349)
- OneCheck™ automates field tests and simplifies Copper and DSL results to consistently close jobs correctly
- StrataSync™ cloud-enabled asset and test data management provides visibility for test results and completed tasks and keeps track of used instrument inventory
- Modular platform scales for new WiFi, fiber, and xDSL technology including VDSL Profile 35b and G.fast
- OneExpert™ app uses everyday mobile devices for remote control, data enhancements, and connectivity

Open, Modular Design

OneExpert offers the advantages of integrated cloud-based applications, touch screen interfaces, smartphones, and tablets. OneExpert helps technicians perform more efficiently and fix problems faster while ensuring service providers can invest in a long-term, open platform.

OneExpert Feature	What It Does	Why It Is Needed
Modular hardware	Ensures tester can be updated in line with technology and market advancements	Future-proofs your investment
Remote software upgrades	Software can be enhanced and upgraded in the field	Keeps hardware updated with the latest best-practice test applications
Multitouch user interface	Includes pinch-to-zoom, scrolling, flick, and more	Enhances ease-of use by leveraging a user's mobile and tablet experience
Large screen	Complete graphs appear on a single screen	Improved ergonomics, particularly with TDR trace reading
Bluetooth®/WiFi-ready connectivity	Optional wireless connectivity	Easy communication with mobile devices, PCs and cloud
OneCheck Copper and OneCheck DSL	Automated Viavi suite of tests, many with pass/fail results	Leverages best practices to make complex tasks easy
StrataSync	Cloud-based solution manages Viavi instrument assets and field data results	Plug-and-play back-office integration

xDSL Testing up to G.fast

A sync test is essential in characterizing DSL link quality (bandwidth rates, margins, errors, and likelihood for errors). This test also helps determine whether issues are coming from the equipment (CPE or DSLAM/DPU ports) or from the profile settings. It shows important results on a single DSL summary screen page.

OneExpert supports:

- ADSL/2+ on a single and dual pair
- VDSL single line up to profile 30a
- VDSL single line vectoring, bonded and bonded vectoring up to profile 17a
- VDSL profile 35b
- G.fast

DSL/G.fast summary

Bits-per-tone (BPT) vs SNR graph

DSL Test	What It Does	Why It Is Needed
Synchronization test	Synchronization in auto mode or with a dedicated profile	Verifies the DSL service has been activated on the line under test
Profile	Displays the VDSL2 profile in use on the connection	Mismatch between DSLAM/DPU profile, CPE settings, and customer's expectations
Margins and attenuation	Allows verification that SNR margins and attenuations are within acceptable limits	Copper loops are exposed to external noise. Adequate noise margins maintain DSL connection quality. Higher attenuation results in lower SNR.
DSL errors	CRC, FEC, LOS, LOF, and LOM	DSL errors will transfer to application layers such as IP video
DSL RTX (G.INP)	DSL retransmission: status, retransmitted DTUs, corrected DTUs, uncorrected DTUs, INP REIN	DSL RTX support to match CPE and statistics to highlight DSL lines at risk, already using retransmission

BPT graph	Displays the bit-loading per tone	Can help to identify disturbers and interferers present on the line
Hlog graph	Loop attenuation component of the channel transfer function (during the modem training phase)	Can detect bridged taps, degraded contacts, and bad joints
QLN graph	Noise floor of the DSL line	Shows frequency of potential disturbers/interferers on the DSL line

Single Test-Lead Connection

When connecting copper test leads, technicians will try to reduce the expense of multiple test cables as well the incidence of errors resulting from using the wrong lead. It is critical to get a proper connection with a good ground, or risk rendering meaningless test results. However, swapping between DSL testing and copper testing during troubleshooting adds time and risks losing test-lead connection quality.

OneExpert lets technicians focus on test leads once, regardless of the number of DSL and copper tests that follow, saving time and, more importantly, avoiding misleading or incorrect results.

Single Test-Lead Connection	What It Tests	Why It Is Needed
All tests are conducted from a single test-lead connection	DSL and copper thru a single test- lead connection	Reduces the risk of misleading results from bad test lead connections

TrueSpeed (TCP RFC-6349 Speed Testing)

Broadband IP networks and their throughput speeds are non-deterministic and their behavior is unpredictable. OneExpert TrueSpeed provides a standardized RFC-6349 speed test to measure the throughput at the TCP application layer just as a user would experience it. Other methods, such as FTP upload/download, cannot accurately test ultra-fast broadband rates provided by technologies like Super Vectoring and G.fast..

OneExpert TrueSpeed throughput test up to 1Gbps

TrueSpeed Test	What it Tests	Why is it Needed?
Actual rate (up/down)	Actual achieved TCP throughput up to 1Gbps	Measure throughput as customers experience it at the application layer
Ideal rate (up/down)	Baseline for achievable TCP throughput without physical layer overhead	Provides a baseline for an ideal-expected-TCP throughput based on the physical layer rate
TCP Efficiency	Ratio of Successful TCP transmitted without retransmission to the total TCP transmitted	A large throughput isn't very useful for the customer if a lot of IP packets need to be retransmitted
Round trip time (RTT)	Baseline round-trip delay measurement	Calculate the bandwidth delay product (BDP) to identify impact of RTT to network throughput
Maximum segment size (MSS)	Test-optimized segment size to achieve maximum throughput speed	Per RFC-4821 to ensure that the TCP payload remains unfragmented and unnecessary IP overhead is avoided

IP Data — Web

Internet subscribers demand reliable connectivity and new applications require higher data throughput and network-delay time performance. DSL error protection using interleave delay and error recovery mechanisms, like those for IP video, counteract time-sensitive data throughput using TCP/IP with acknowledgment and retransmission. The OneExpert tester allows technicians to quickly test internet connectivity using the built-in web browser. It tests the data rates provided by VDSL vectoring with FTP/HTTP throughput as key reference tests for TCP/IP applications. Mature tests like IP ping delay are still necessary, especially for real-time applications, such as online gaming.

IP Data Test	What It Tests	Why It Is Needed
User authentication	IPoE, PPPoE, IPv4, and IPv6	Customer service turn-up
Web browser	Connection to any website	Differentiates between network problems and web-server downtimes and isolates customer PC or mobile devices as points of failure
IP ping and TraceRoute	Delay time through the network and routing	Network delay is crucial, especially with high- interaction applications such as gaming
FTP/HTTP throughput	Upload and download rates	DSL profile parameters, such as INP, delay, and network aggregation issues, determine user-experienced data speeds

IP Video

OneExpert can test multiple standard and high-definition television (SDTV/HDTV) streams regardless of compression format (MPEG-2, MPEG-4p10/H.264, VC-1, and others) and automatically detects the stream type with the Broadcast Auto feature. The OneExpert IP Video application allows for termination of the IP video stream anywhere in the access network using the DSL or Ethernet interface.

Key performance indicators for real-time protocol (RTP) lets the OneExpert DSL precisely measure network QoS and QoE. QoS Expert easily compares critical quality-of-service metrics such as error indicator, continuity error, lost packets, jitter, and latency between two active streams.

IP Video Test	What It Tests	Why It Is Needed
IP video stream availability	Access to one or more SDTV or HDTV streams	Content might come from different sources; possible bandwidth limitations if more than one stream is active
Quality of service	Key IP video performance indicators such as jitter, loss, latency, error indicator; includes QoS Expert to compare performance between two streams	Easy-to-understand pass/ fail metrics if IP video is of good quality
Packet loss analysis	Minimum distance, maximum period, RTP loss and errors	Detailed analysis on on Quality of Experience impact
Rates analysis	Video, audio, and data substream rates	Bandwidth consumption in relation to total available rates
PID map	PID for video, audio, data	Availability of all stream components

IP Video QoS testing

Link Up		Active Streams	Combined Rate
Link Up	Network Up	Current	Max
192.168.2.148	4	12.4 M	12.4 M

Stream 1		Stream 4	
Current	Max	Current	Max
0	N/A	0	N/A
0.0 %	0.0 %	0.0 %	0.0 %
0.0 %	0.0 %	0.0 %	0.0 %
3 ms	3 ms	2 ms	3 ms
Pass	N/A	Pass	N/A
Pass	Pass	Pass	Pass

OneExpert IP Video — QoS Expert

VoIP

The OneExpert is the ideal test tool to quickly place VoIP calls and verify QoS via mean opinion score (MOS) values. A DSL or Ethernet TE interface tests VoIP anywhere in the access network, replacing either the DSL modem, VoIP phone, or both. The OneExpert also includes an Auto Answer mode in which the unit automatically responds to an incoming call. Viavi provides a wide range voice decoding controls such as G.711, G.722, G.723, G.726, and G.729.

VoIP Test	What It Tests	Why It Is Needed
Service setup/provisioning	Registration with gateway as a SIP VoIP client	User setup and server availability. VoIP clients and servers can have complex setups — preclude setup errors
Connectivity beyond signaling gateway	Placing test calls on and off network	Call connection from VoIP-to-VoIP and VoIP-to- public switched telephone network (PSTN)
Call quality	MOS, near- and far-end QoS with packet loss, jitter, delay, and R-Factor	Test how VoIP calls are transferred through the network and received at the customer premises

VoIP Test Selection

VoIP Call Summary

OneExpertDSL tests VoIP throughout the IP network registration with gateway, test calls on and off the network, and measures near- and far-end IP QoS and MoS.

OneCheck Copper

It is critical to test the copper prior to turning up DSL. What may have worked for POTS or lower-speed DSL may not work for VDSL or as the plant degrades. OneExpert's OneCheck Copper function simplifies copper testing for field technicians with repeatable pass/fail results.

Copper Tests	What It Tests	Why It Is Needed
Voltage	Foreign voltages	Safety and identifies cross-battery impairments
Resistance	Insulation between tip-A and ring-B and between tip-A, ring-B, and ground-E	Leakage resistance affects DSL sync and performance
Opens (capacitance)	Loop length and capacitive balance	Cable damage, one side open, loop length must be acceptable for DSL
Balance	Longitudinal balance, resistive balance, capacitive balance	Robustness against noise, otherwise reduced BPT
Load coil	Presence of load coils	Load coils act as low-pass filters and must be removed for DSL to work properly
Ground check	Ground connection check for balance	Poor or lack of ground leads to incorrect results, hides possible impairments

OneCheck Copper

Inexperienced technicians often will call in a copper expert as soon as they are unable to find a fix, even without being sure the copper is faulty, extending repair times and increasing OpEx. OneCheck Copper lets any tier-1 technician assess copper-pair health automatically by testing the copper circuit as a single-ended line test (SELT) to rule out foreign voltages, opens, shorts, or load coils are on the line. It also tests whether the line is balanced enough for noise rejection so that it does not interfere with the DSL signal.

Copper-loop issues such as foreign voltage, opens shorts, and load coils can impact DSL and triple-play performance

OneCheck™ TDR

OneCheck TDR allows for both simplicity and accuracy to avoid false TDR readings—not one or the other, as with most TDRs. The automated TDR fault identification mode using patented time varying gain (TVG) and adaptive pulse width technologies precisely locates faults in access copper loops and inside home networks. OneCheck™ TDR is a fast test that provides real-time updates.

TDR Test	What It Tests	Why It Is Needed
Loop length	Location of the cable end	VDSL requires shorter loop lengths than ADSL2+; loop lengths must be acceptable for the technology used.
Bridged taps	Length of bridged taps	Bridged taps cause unwanted reflections at the splice point and tap ends. The reflected signal, or circuit noise, degrades DSL performance. Also, bridged taps can act as an antenna picking up external noise along the tap. Bridged taps should be removed when possible to improve DSL performance.
Opens, shorts	Opens and shorts	Cable damage.
Corroded contacts	Presence of corroded contacts	Corroded contacts act as resistive (imbalance) or capacitive (opens) faults that especially impact the pair's continuity and overall balance making it more susceptible to noise, thus degrading DSL performance.
Bad splices	Presence of bad splices	Bad splices cause unwanted reflections similar to resistive faults that impact the pair's overall balance making it more susceptible to noise, thus degrading DSL performance.
Load coil	Location of load coils	Load coils act as low-pass filters and must be removed for DSL to work.

OneCheck TDR mode

Locate Copper Impairments

Pristine copper plant enables error free service and high data rates. Qualify the severity of copper impairments and locate copper faults.

Copper Test	What It Tests	Why It Is Needed
Spectral	Identifies precise amplitude and frequency of disturbers; includes technology selection for ADSL2+ / VDSL2 and power harmonics; max hold or actual values	Noise disturbers can impact DSL performance
WB noise	Quickly identifies if noise across bandwidth predefined or custom definable filter settings is an issue	Crosstalk and noise can impact DSL performance
WB impulse noise	Impulse noise across filter band based on technology selection; counts impulse noise disturbers; shows impulse noise disturber signature in frequency and time domain	Impulse noise disturbers might not be recoverable and can cause intermittent DSL failures
WB receive tones	Receive power levels	DSL performance is depending on loop length
Resistive fault locator (RFL)	Resistive path from either wire in a pair to battery or ground or across the pair; distance to fault; includes UFED support	Resistive faults impact DSL performance by upsetting pair balance or subjecting the pair directly to increased noise; lowers SNR; fewer bits per tone
K-test	Pairs with a fault on both wires (double-sided resistive fault); distance to faults; includes UFED support	Resistive faults impact DSL performance by upsetting pair balance or subjecting the pair directly to increased noise; lowers SNR; fewer bits per tone

Spectral Power Harmonics

Wideband Noise

Wideband Impulse Noise

POTS Dialer

OneExpert reduces the number of test tools a technician needs to carry by providing an integrated butt set. Technicians can use the POTS dialer to verify a line's continuity to the exchange and that it works without conflicting with the customer's broadband equipment due to an eventual missing or defective POTS splitter.

Copper Test	What It Tests	Why It Is Needed
POTS	DTMF and pulse POTS calls, caller ID	Connectivity to exchange and determining if POTS is available, dial test line facilities in an exchange

POTS Dialer

OneExpert UltraFED

The UltraFED connects the far end of the pair under test while the OneExpert controls it remotely. One technician with one piece of equipment can now perform two-ended pair testing. This makes testing easier and faster as it eliminates driving to the other end of the cable in order to change line conditions.

UltraFED Function	What it Does	Why It Is Needed
TDR Helper	Alternately opens and shorts the line across Tip (A) and Ring (B)	TDR Helper lets technicians quickly identify the end of the cable or the location of the UltraFED by observing up (open)/dip down (shorted) status
RFL Strap	Remotely sets the short/strap line condition	RFL test requires a far-end short between Tip (A) and Ring (B); K-Test is a two-step procedure started with an open, followed by a short at the far end between Tip (A) and Ring (B)
Open All	Disconnects Tip (A), Ring (B), and Ground (Earth) from the cable pairs	Isolate the pair under test **
Tip (A) / Ring (B) Short	Strap mode: Connects Tip (A) to Ring (B)	Used with Loop Resistance or RFL measurements **
Tip (A) / Ring (B) / Ground (Earth) Short	Connects Tip (A), Ring (B) and Ground (Earth) to Ground (Earth). Also called strap mode	Used while measuring Resistive Balance **

UltraFED Function	What it Does	Why It Is Needed
Quit Termination	Terminates the pair at the far end	Copper testing for Noise, Impulse Noise, Spectral should be run with a proper termination at the far end as it makes the pair look like it is with real equipment on each end **
Single Tone	Connects a tone generator across Tip (A) to Ring (B)	Loss measurement **
Trace Tone	Connects a tone generator across Tip (A) to Ring (B) and sends 577 and 1004 Hz tones with cadence High-Low or Low-Low-High	Identifying pair under test **
Off/THRU	Connects Tip (A) and Ring (B) to the CO Tip (A) and Ring (B)	Maintain "in-service" customer connection and "out-of-service" as necessary during test**

OneExpert UltraFED saves time and simplifies copper testing

Wiring Tools

Where available, Ethernet cabling is typically preferred for home networks because it delivers optimal data rates and quality of service. OneExpert wiring tools allow for Ethernet CAT5/6/7 or phone- wiring CAT3 testing. Technicians can quickly set up a home network using the Wire Mapping Smart Remote and resistive IDs as remote probes. Further, OneExpert supports Hub Flash, port discovery and a ping tool against multiple targets including gateway, DNS and target host/IP addresses.

Wiring Tool	What It Tests	Why It Is Needed
Wire mapping	Uses the Wire Mapping Smart Remote to test for physical-layer issues	Locate improper wire connections
Loop length	Loop length per pair	Verify cable run lengths
Opens, shorts	Location of opens, shorts	Cable damage, splices, or port connections
Cable identification	Cable run identification with resistive IDs	Multiple cable runs in the wired home network
Hub flash	Determine to which port the cable is connected	Ports at residential gateways (RG) might have different functional assignments

Wiring Tool	What It Tests	Why It Is Needed
Port discovery	Identifies an Ethernet connection and reports speed of link, signal to noise ration, skew	Ethernet port configuration or cable wiring might limit the port capabilities within a range of 10, 100, 1000 Mbps, half- or full duplex.
Ping tool	Connectivity to various network resources such as the gateway, DSN, and selected IP addresses	Network connectivity segmentation – home network versus Internet

Wire Mapping Smart Remote

WiFi Test	What It Tests	Why It Is Needed
WiFi AP	Connect OneExpert via Ethernet cable to a router or residential gateway to configure as a WiFi AP (Ethernet bridge to WiFi)	Verify Internet connectivity, configure CPE, and run tests from mobile devices

WiFi Network Scan

OneExpert providing WiFi access point

WiFi Advisor

With support for the WiFi Advisor accessory on the OneExpert, technicians can evaluate wireless network performance seamlessly for both 2.4 and 5 GHz networks. With support for 802.11 standards a/b/g/n and ac, the ONX and WiFi Advisor combination make WiFi problem solving easier.

Using a single WFED-300AC device, users can quickly visualize, optimize, and troubleshoot WiFi networks with BSSID, Channel, and Spectral views. BSSID view provides quick visibility into active wireless networks and identifies the least-crowded channel to use for an access point. Channel view finds the best channels for an access point by showing utilization, noise, co-channel interferers, adjacent channel interferers, and an overall channel score for each channel. Spectral view shows damaging RF interference with a real-time spectral analyzer configurable by 802.11 band, channel, and channel width.

WiFi Test	What It Tests	Why It Is Needed
BSSID details	View information for a specific AP	Determine whether an AP is running in legacy mode or with outdated security settings
BSSID view	View all APs by channel	See the WiFi environment across 2.4 GHz and 5 GHz bands to visually determine crowded channels
Channel view	Displays channel utilization, noise, channel score, and best channels	Quickly determine the best channel for WiFi deployment and troubleshooting
Spectral analyzer	Real time 802.11 and non-802.11 spectrum	Locate interference sources such as Bluetooth devices and microwave ovens

Port discovery

Wire mapping

WiFi (Internal)

The use of wireless devices and networks is becoming a common part of every household. With the OneExpert WiFi Scan, technicians are equipped with wireless 802.11b/g/n (2.4 GHz) testing capability to show the signal strength, secure set identification (SSID), configured channel, security, MAC address, and 802.11 protocol at the test location of each wireless 802.11b/g/n network in the area. It also indicates whether a network is secure or vulnerable to security threats.

WiFi Test	What It Tests	Why It Is Needed
WiFi scan	WiFi access point (AP) station scan	Discover potential interfering networks (which could cause slow data transfer speeds), and locate weak spots in the WiFi signal to suggest a better location of the router

WiFi Test	What It Tests	Why It Is Needed
Site Assessment Assistant	Works with WiFi Advisor to determine throughput of a WiFi system	TrueMargin™ is the measure of throughput in the actual environment

OneExpert controls the Wifi Advisor for Single Ended Operation with Best Channel

OneExpert supports the Wifi Advisor Dual-ended mode of operation providing TrueMargin and allows optimization of the Access Point placement

RSSI view per channel

The test application identifies the best channel for WiFi service

Fiber

Broadband DSL networks and broadband triple-play services often rely on fiber networks. Examples are fiber-to-the-cabinet (FTTC) or fiber-to-the-distribution-point (FTTdp) that bring the DSLAM closer to the customer for greater VDSL bandwidth. The DSLAM is served with fiber back to the exchange to carry broadband signals. Another example is business customers connected to their service providers via ADSL2+/VDSL and via fiber. This drives the need for field technicians who work in these environments to have both DSL and fiber test capabilities.

For point-to-point fiber installations such as FTTC or business connections, field technicians can use the OneExpert together with the Viavi Solutions MP-60 or MP-80 USB optical power meter (OPM) to ensure that fiber cable attenuation meets system requirement performance and is ready to survive network aging and environmental

impacts.

MP-60 optical power meter

P5000i optical fiber scope

In combination with a Viavi SmartPocket optical laser source (OLS), the OneExpert equipped with an MP-60 or MP-80 OPM can automatically perform optical link loss measurement at different wavelengths—resulting in a faster and more comprehensive fiber test.

Using the P5000i optical fiber scope, technicians can test the #1 cause for troubleshooting in optical networks—contaminated fiber connectors. The P5000i provides pass/fail analysis based on user-selectable acceptance profiles.

Fiber Test	What It Tests	Why It Is Needed
Optical fiber scope	Pass/fail against predefined profile; includes dual magnification	Contaminated fiber connectors are the #1 cause for troubleshooting in optical networks
Optical power level	Optical power level with pass/fail and reference values	Optical loss must be within budget at ONU site

Fiber Power Meter

Fiber Scope Analysis

Coax

Problematic coax cable accounts for most repeat calls as well as video, voice, data, and multiroom DVR installation problems. Most home coax has never even been tested at the frequency ranges that support these services so problems become more apparent after service installation.

The powerful OneExpert in conjunction with the optional Viavi SmartID coax probes can verify in-home coax (quality and topology) and service distribution to quickly display and certify subscriber

coax topology. It immediately identifies and locates physical-layer impairments that affect both triple-play and multiroom DVR services saving valuable troubleshooting time and eliminating the need for repeatedly segmenting the network, making changes, and then retesting. Technicians use the information the device provides to determine whether they can quickly fix the drop, replace it with a new one, or use an alternative means to supply service to the location.

Coax home network under test with SmartIDs

After completing physical-layer testing with SmartIDs, technicians can use the HPNA test to verify the coax network with CPE.

Smart ID Coax Test Sequence	What It Tests	Why It Is Needed
Bidirectional FDR	Events that cause excessive loss or reflectance	Locates bad splitters and connectors in the network
HPNA frequency sweep	All legs and in both directions	Ensures services like whole-home DVR will work
Noise ingress measurements	Each endpoint in the home	Identifies HPNA interferers

HPNA

The HPNA technology standard developed by the Home Phoneline Network Alliance (HomePNA™) builds on Ethernet to connect and integrate all the home network components over an unpredictable wiring topology. The HPNA communication is used to pass information around a home to other HPNA-connected devices.

In the HPNA test, OneExpert connects to the HPNA network via CPE and communicates with the HPNA network host to initiate the test. Each communication path between all HPNA network nodes will be tested, letting users segment problem node paths, node-to-node communication issues, and verify that the whole network is functioning correctly. OneExpert can verify that HPNA networks are operating within expected service quality metrics and users can set up pass/fail limits to help simplify testing.

Mobile App

Testing with the OneExpert mobile iOS app is quicker and more efficient because technicians can leave the test set plugged in at one location and run tests remotely using the mobile app. Manage job files and export completed jobs to a server.

Providers need back-office integration to expand the benefits of collecting daily field test results . The mobile app leverages smartphones or tablets to link internal databases to instrument test results.

Mobile Device Integration	What It Does	Why It Is Needed
Job manager	Helps manage and enrich test results	Back-office integration
Remote access	Lets users remotely control the unit from a mobile device	Inconvenient test set access or several locations to fix between the test point and the fault
Extra information	Delivers tutorials, manuals, photos of all part numbers	Helps technicians in the field

StrataSync

Field operation groups face a challenge keeping track of their test equipment inventory: types of instruments, firmware versions, options, and automated test configurations that match standardized methods and procedures. The challenge increases every time a change must be deployed. Without a means to collect and analyze test data, valuable information about network health is missed.

StrataSync is a hosted, cloud-based solution that manages assets, configurations, and test data for Viavi instruments to ensure they are all equipped with the latest software and installed options. It manages inventory, test results, and performance data from anywhere with browser-based ease improving both technician and instrument efficiency. StrataSync manages and tracks test instruments and collects data from the entire network that can be leveraged for results analysis, and informs and trains the workforce.

StrataSync	What It Does	Why It Is Needed
Asset management	Manages and tracks test instruments by displaying assets, modules, versions, and locations. Maintains accurate instrument configuration and setup. Provides visibility into instrument utilization.	Save time by eliminating time wasted on instrument setup. Reduce repeats with correctly configured instruments. Improve results and reduce operating costs.
Data-result management	Collects and analyzes results with centralized collection and storage, secure visibility from anywhere, and consolidated test data/metrics.	Access more data with centrally collected results for better use. Speed problem resolution by sharing data for faster troubleshooting. Drive compliance by tracking and comparing technician performance.
Updates the workforce	Informs and trains the workforce through alerts, release notes and manuals, and a comprehensive product-knowledge library.	Inform the workforce using a single source for instrument status, new capabilities, and educational content. Improve performance with quick access to training and troubleshooting information. Stay current with alerts for expiring warranties and overdue calibrations.

Simple with built-in expertise	Standardize your process	Right the first time, every time!
Fast	Consistent	Complete

Specifications

DSL Modems

*Specifications apply to all modems listed unless a modem part is listed after the specification. When listed in the specification, it only applies to parts listed after the specification.

Test Interface

Replaceable test module; test access over copper test leads (tip A, ring B leads for single channel; T/A, R/B, T1/A1, R1/B1 for bonding) or 8-pin modular (RJ45 type) with pin assignments 4 and 5 for DSL single pair and 3, 4, 5, 6 for DSL bonding.

Modem Chipset and Version

Catalog #	Chipset	Configuration
ONX-BDCM-GFAST	Broadcom 63138	OneExpert Broadcom 63138 (ADSL/VDSL Bonded, G.fast) Test Module
ONX-BDCM-DSL-BONDED	Broadcom 63138	OneExpert Broadcom 63168 (ADSL/VDSL Bonded)
ONX-BDCM-DSL-ANXAB	Broadcom 63168	OneExpert Broadcom 63168 (VDSL, ADSL2+ ANX A/B) test module

G.fast (Fast access to subscriber terminals) Standard Compliance

ITU-T G.9700 for module ONX-BDCM-GFAST

ITU-T G.9701 for module ONX-BDCM-GFAST

VDSL Standard Compliance

Standard compliance as supported by the Broadcom 63168 and 63138 chipsets

ITU-T G.993.2 — VDSL2

ITU-T-G.998.1 — ATM bonding for module ONX-BDCM-DSL-BONDED and for ONX-BDCM-GFAST

ITU-T-G.998.2 — PTM bonding for module ONX-BDCM-DSL-BONDED and for ONX-BDCM-GFAST

ITU-T-G.993.5 — Self-FEXT cancellation (vectoring)

ITU-T-G.998.4 — Improved impulse noise protection for DSL transceivers

Single-pair profiles: 8a/8b/8c/8d, 12a/12b, 17a, 30a for module ONX-BDCM-GFAST, ONX-BDCM-DSL-BONDED and ONX-BDCM-DSL-ANXAB

Vectoring profiles single-pair: 8a/8b/8c/8d, 12a/12b, 17a for module ONX-BDCM-DSL-BONDED and ONX-BDCM-DSL-ANXAB

Dual-pair profiles: 8a/8b/8c/8d, 12a/12b, 17a for module ONX-BDCM-DSL-BONDED and ONX-BDCM-GFAST

Vectoring profiles single-pair: 8a/8b/8c/8d, 12a/12b, 17a, 35b for module ONX-BDCM-GFAST

Vectoring profiles dual-pair: 8a/8b/8c/8d, 12a/12b, 17a for module ONX-BDCM-DSL-BONDED and ONX-BDCM-GFAST

Band plan 997 and 998, U0 band

10/100/1000 Ethernet TE
Test Interface
10/100/1000 Ethernet, RJ45
2 ports
Test Results
Link status, speed, duplex
Network
Test Interface
ADSL2+/VDSL2/G.fast modem
Ethernet 10/100/1000 (ports 1 and 2; non-blocking switching between ports)
Network Types
DSL/G.fast terminate
DSL/G.fast Trough-router
DSL/G.fast through-bridge
Ethernet terminate
Data Mode
IPoE, PPPoE, multi-VLAN, data off
IP Mode
IPv4, IPv6, IPv4/IPv6 dual stack
IPoA, PPPoA for xDSL and G.fast

MAC Setting
Factory default, user-defined
PPP/IP Connectivity
BRAS: PAP/CHAP, IPCP
RFCs 2516, 1483, 2684
VLAN Setting
Tag on/off
VLAN interface count 1 to 6
ID selection 0-4095
Priority selection 0-7

Ordering Information

The OneExpert can be ordered fully configured for high-end ADSL2+/VDSL2 /G.fast and copper test demands or scaled for specific needs and applications, such as all fiber only without copper.

Included Test Applications (all mainframes and package orders except noted differently below)	
Copper on mainframe ONX-580	
TDR	
OneCheck Copper	
DVOM	
Opens	
Longitudinal balance	
Load coil	
POTS TDR	
Wiring Tools	
Wire map on mainframe ONX-580	
Hub flash

WiFi Advisor Installer Package	WFED300AC-2PC
Services and Support Plans	
Bronze Support Plan 5 years	BRONZE-5
Silver Support Plan 3 years	SILVER-3
Silver Support Plan 5 years	SILVER-5

1. Requires SmartID and SmartID Plus to be ordered separately.

2. Includes test applications as specified above. Requires selection of battery, AC universal power adapter, and power cord.

3. Requires VoIP software option.

4. Enables copper RX tones, spectral, WB noise, wideband impulse noise, wideband impulse noise capture.
